

Justin Morrow – 09/06/2026

Assignment: Module 6.2

Create the class MyInteger to hold a single integer to be set in the constructor by a parameter. The class needs to contain the methods: isEven, isOdd, isPrime, getter, and setter

Justin's PHP MyInteger Class

Testing the 1st Integer Instance myInteger_01

Integer Value: 8
Is the Integer Even: Yes
Is the Integer Odd: No
Is the Integer Prime: No

After using the Setter method the Integer is changed to: 7
Is the Integer Even: No
Is the Integer Odd: Yes
Is the Integer Prime: Yes

Testing the 2nd Integer Instance myInteger_02

Integer Value: 11
Is the Integer Even: No
Is the Integer Odd: Yes
Is the Integer Prime: Yes

After using the Setter method the Integer is changed to: 10
Is the Integer Even: Yes
Is the Integer Odd: No
Is the Integer Prime: No
